Esri resources for your organization

Course introduction

Course introduction
Course goals
Installing the course data
Training Services account credentials
Icons used in this workbook

1 Getting started with ArcGIS Pro

Lesson introduction
ArcGIS Pro features
Licensing ArcGIS Pro
Template options for creating an ArcGIS Pro project
Project structure
ArcGIS Pro interface
Exercise 1: Use map navigation and data exploration tools
- Create a project
- Add a folder connection
- Add layers to the map
- Use ArcGIS Pro Help to find tools
- Use the Explore tool to navigate the map
- View feature attributes
- Select features interactively
- Change the basemap

Lesson review
Answers to Lesson 1 questions

2 Working with GIS data

Lesson introduction
Data storage models
Spatial data properties
Locating key data properties
Exercise 2A: Connect to data sources in ArcGIS Pro
- Add shapefiles to a map
- Add geodatabase feature classes to a map
- Add data from ArcGIS Online

Getting data into a geodatabase

Exercise 2B: Populate a geodatabase with data
Use ArcGIS Pro without a template
Create a file geodatabase
Transfer data between geodatabases
Import a shapefile into a geodatabase feature class
Import multiple feature classes into a geodatabase
Convert tabular data
Convert online data
Lesson review
Answers to Lesson 2 questions

3 Coordinate systems

Lesson introduction
Differentiate between coordinate system types
Geographic transformations
Importance of projected data
Projecting data
Exercise 3: Change coordinate systems
Import a map file
Inspect spatial reference properties
Inspect on-the-fly projection and transformation settings
Set datum transformation for a map
Transform datum for source data
Explore a shapefile coordinate system
Project a shapefile
Lesson review
Answers to Lesson 3 questions

4 Symbolizing layers

Lesson introduction
Attribute types and layer symbology
Types of layer symbology
Differentiating between layer symbology
Classification methods
Selecting a symbology option
Exercise 4: Symbolize layers using different methods
Use unique values
Use graduated colors
Use graduated symbols
Symbolize features by density
Lesson review

Answers to Lesson 4 questions

5 Controlling feature display

Lesson introduction
Types of selection queries
Selecting features using queries
Exercise 5A: Use queries to select features
- Import a map file
- Create an attribute query
- Add a second clause to an attribute query
- Create a selection layer
- Create a spatial query based on distance
- Create a spatial query based on a geometric intersection
- Create a new feature class from selected features

Definition queries
Displaying features at different scales
Symbol classes
Exercise 5B: Control the visibility of features
- Set scale ranges on layers
- Use scale-based symbol classes
- Create a definition query
- Modify a definition query
- Create multiple definition queries for a layer

Lesson review
Answers to Lesson 5 questions

6 Adding text to a map

Lesson introduction
Defining characteristics of map labels
Exercise 6A: Add and modify labels
- Add a layer to a new map
- Label features
- Change the label field
- Modify the label font
- Change the label position

Using label classes
Exercise 6B: Create label classes
- Explore attributes
- Create label classes for each airport type
- Define label class criteria for regional airports
- Define label class criteria for local airports
- Define label class criteria for international airports

Set scale dependencies on label classes
Geodatabase annotation
Choosing standard or feature-linked annotation
Exercise 6C: Create and modify geodatabase annotation
Import a map file
Convert labels to annotation
Modify annotation text
Modify annotation placement
Create annotation features
Lesson review
Answers to Lesson 6 questions

7 Visualizing data in 3D

Lesson introduction
3D mapping capabilities
Local and global scenes
Exploring elevation sources
Exercise 7A: Create a local scene
Open a map file
Convert a map to a scene
Add a ground source
Displaying features in 3D
Exercise 7B: Extrude features
Extrude block groups based on an attribute
Visualize subsurface data
View a 2D map and 3D view together
Lesson review

8 Creating features from tabular data

Lesson introduction
Indirectly storing spatial data
Evaluate tabular data
Displaying x,y coordinates in a map
Exercise 8: Create point features from x,y coordinates
Import a global scene
Explore tabular data
Create point features from a table containing x,y coordinates
Lesson review

Answers to Lesson 8 questions

9 Associating tabular data

Lesson introduction
Table relationships
Common table management items
Exercise 9A: Prepare tabular data
- Import a map and explore tabular data
- Export the CSV file into a geodatabase
- Add and calculate a field

Table cardinality
Joins and relates
Exploring joins and relates
Choosing joins or relates
Exercise 9B: Create table associations
- Join tables
- Use joined fields
- Export a joined layer
- Create a relate
- Use the relate to access associated records

Lesson review
Answers to Lesson 9 questions

10 Editing features and attributes

Lesson introduction
Editing in ArcGIS Pro
Editing features
ArcGIS Pro editing environment
Exercise 10A: Create features by digitizing
- Open a map
- Modify a feature template
- Digitize a polygon
- Update attributes
- Digitize line features

Feature modification tools
Exercise 10B: Modify existing features
- Modify vertices
- Reshape a feature
- Split a polygon
- Merge polygons

Lesson review

11 Spatial analysis

Lesson introduction
Spatial analysis workflow
Types of analysis
Geoprocessing tools
Exploring the analysis environment
Exercise 11: Answer questions using analysis tools
- Import a map
- Set analysis environments
- Buffer data
- Extract features from a layer
- Perform an intersect between two layers
- Explore results of the intersect
- Use a spatial join to add attributes to a data layer
- Summarize data

Lesson review

12 Analysis using ModelBuilder

Lesson introduction
Automating your analysis
Why use ModelBuilder?
Exploring model elements
Exercise 12: Automate an analysis workflow with ModelBuilder
- Create a model
- Add the Buffer tool to the model
- Add the Make Feature Layer tool to the model
- Add the Intersect tool to the model
- Add the Spatial Join tool to the model
- Add the Summary Statistics tool to the model
- Run the model and explore results
- Prepare the model for sharing

Lesson review

13 Map layouts

Lesson introduction
What is a map layout?
Map objectives
Explore a map layout
Creating a map layout

Exercise 13: Create a map layout for analysis results
Open a map file
Create a layout
Add a map frame
Add a north arrow
Add a scale bar
Add an inset map and supporting elements
Add a title
Add a legend
Add a table frame
Lesson review
Answers to Lesson 13 questions

14 Sharing with ArcGIS Pro

Lesson introduction
Sharing methods
Sharing roles and permissions
Exercise 14: Share analysis results
Share a map file
Share a layer package
Share a map package
Share a web map
Lesson review

Appendices

Appendix A: Esri data license agreement
Appendix B: Refined map example
Appendix C: Answers to lesson review questions
Appendix D: Additional resources
